

The network shows up in a **backpack.**

MISSION ADVANTAGE ANYWHERE Contingency communications for the first 72 hours.

A family of carry-on kits that keeps a dispersed team connected and reporting when the network they normally use is gone. It moves traffic over whatever path is available, whether mesh, satellite or cellular, and puts the team's position, status and observations onto the command and control picture the unit already watches.

BUILT FOR THE PACIFIC

Distributed maritime operations, expeditionary advanced basing and agile combat employment all assume a network waiting at the far end of the movement. There is rarely one there on day one.

Teams disperse to austere and contingency sites, relocate a command post, or operate outside the network boundary, and for the first 24 to 72 hours they are limited to what one person can carry. **The kit is what that person carries.**

The gap is not only expeditionary. When coordination runs on personal phones and legacy voice, **the coordination itself becomes the delay.**

WHAT IT DOES

- Stands up a local team net in minutes, peer to peer, with no hub to lose
- Carries a PACE order set before the mission and reports which path is live
- Lands position, status and observations in TAK, Envision, MSS and Advana
- Instruments itself, so a rehearsal produces measured data rather than recollection
- Adds no command and control authority. Existing systems stay the authority

Talk to us about a node,
an exercise, or **a joint rehearsal.**

NODE CLASSES

MOBILE
\$2,500 / node

One operator on the picture. Pelican 1120 charge case, iPhone 17 Pro, Garmin inReach Mini 3 Plus, backup power and cabling. Charges closed, issued ready to use.

FLYAWAY
\$6,000 / node

A team or vehicle, moving. Mobile node plus a Starlink Mini LEO terminal, power adapter and team datalink, in a single-person carry pack.

PERSIST
\$30,000 / node

The node that stays. Compute and gateway, encrypted mesh head-end for the local dark net, LEO reach-back and high-capacity power in a rugged carry-on.

SPECIFICATIONS

SPECIFICATION	MOBILE	FLYAWAY	PERSIST
Form factor	Pelican 1120 Protector Case	Mobile case and LEO terminal in a tactical pack	Rugged carry-on case
Dimensions	21.4 × 17.2 × 9.8 cm 8.41 × 6.76 × 3.87 in	Driven by the 29.9 × 25.9 × 3.9 cm LEO panel. Fits a 25 to 35 L pack	56 × 36 × 23 cm 22 × 14 × 9 in
Weight	0.98 kg (2.2 lb) case, device, messenger	2.1 kg (4.6 lb) excluding pack	11 to 25 kg (25 to 55 lb) by configuration
Power	Internal battery and power bank, USB-C. Charges with the case closed	Mobile power plus 25 to 40 W average for the terminal, 12 to 48 V	300 W bus. 12 to 36 VDC, 90 to 264 VAC
Endurance	Multi-day messenger reporting on 1800 mAh	99 Wh supports roughly 2.5 to 4 h of terminal-on time	BB-2590 and BB-2557. Scales with battery count
Operating temp	Messenger -20 to 60 °C. Device 0 to 35 °C	Terminal -30 to 50 °C	-20 to 50 °C
Ingress	IP67 case and messenger	IP67 terminal with cable installed	IP67 sealed case
Aircraft carriage	Carried, not operated. Powered off in flight, all use off-aircraft. F-22 stowage is a dimensional and mass question only; no EMI or airworthiness qualification is in scope.		

SYSTEM VIEW · SV-2

Any node reaches any bearer it carries, and any bearer reaches the same four systems, so adding a node or a waveform changes one tier without touching the others.

TRANSPORT

Peer-to-peer mesh	Encrypted MANET, every node routes NOW
LEO broadband	Starlink Mini, 100 GB / month NOW
Cellular	Unlimited with hotspot, rotating SIM identifiers NOW
Direct-to-cell	Satellite messaging class NOW
Satellite messenger	Position and text, off-network NOW
Roadmap	UHF / VHF / HF, SATURN, LoRa, HaLow NEXT

POSTURE

Components	Established IL4 items, elements under USAF operational test review toward IL-6
Data handling	Managed service supports CUI today
This combination	New, and carries its own review. No authorisation is inherited or claimed
Device management	Enrols under an existing electronic flight bag MDM programme
Classified	Baseline is unclassified. SECRET is scoped after discovery
Measured	Time to restore the net, and time from edge observation to the C2 picture
